

5                   USE OF NEURO-DERIVED FETAL  
                  CELL LINES FOR TRANSPLANTATION THERAPY

                  ABSTRACT OF THE DISCLOSURE

                  Human fetal neuro-derived cell lines are implanted  
                  into host tissues. The methods allow for treatment of a  
10               variety of neurological disorders and other diseases. A  
                  preferred cell line is SVG.
